

## Changed Pigmentation starting with Batch 229

Due to the requirements of the EUPIA GMP directive, the colour shade 926 of our low-migration ink series Ultra Pack UVFP has been re-formulated with a new pigment.

### Colour Deviation

Compared to the original formula, the deviation of the dE-value on white substrates is 4.8 at full colour, and thus beyond the existing tolerance. This deviation was unavoidable since the range of raw materials suited for low migration requirements is rather limited. Technical properties such as printability and flow are not affected by the pigment exchange.

### Custom Inks

Repeat orders of affected custom inks may be delivered with a slight delay as the formulations have to be revised.

For further information on Ultra Pack UVFP please refer to the Technical Data Sheet on [www.marabu-inks.com](http://www.marabu-inks.com)

### Date of change-over

This change becomes effective starting with **batch 229** (immediately). You will find an additional remark on the label stating:

**„Attention: Modified Pigmentation“**
